

## Platelet Rich Plasma (PRP) Therapy For Arthritis

Arthritis is most commonly associated with the:

# *PRP (Platelet Rich Plasma) Special*

## *\$750.00* Must book appointment by January 31, 2024

Do you suffer from musculoskeletal injuries, chronic tendon injuries such as tennis elbow or jumper's knee, Osteoarthritis, arthritic knees or ankles, stiffness, joint pain, or acute joint injury? Adding PRP injections to a treatment regimen can help to stimulate the healing process, decrease pain and enable a return to activities sooner. Post-surgical PRP injections help heal muscles, tendons and ligaments, as procedures on these tissues have notoriously long recovery times.

Dr. Spencer Threw is board certified in Sports Medicine. His Sports Medicine training allows him to care for all of his patient's aches, pains, strains and sprains. He specializes in musculoskeletal ultrasound guided injections for variety of issues including common arthritis, gout, osteoarthritis, tendonitis, etc. with a goal of getting his patients back on their feet, without pain, and active.
